SAYS

hello

Energy Efficient | Energy Generating | Clear Solar Glass

(ASX:CPV | OTC:CVUEF) e-News | June 2022

FROM THE CHAIRMAN

ClearVue maintains momentum with runway for growth

After border and travel restrictions in Western Australia were lifted in March 2022, it was a great relief to be able to travel to the United States in April and meet in person with our new CEO (North America) Basil Karampelas to progress the expansion of our US operations.

The very busy trip to the US was highly successful and achieved all of the outcomes that we set out to do. It involved a hectic itinerary and full agenda of meetings with investment and banking institutions, shareholders and manufacturers across both the east and west coasts. This included visiting the exciting trial we are conducting in New York.

We also had very positive meetings with leading US and global property developers to introduce our product and technology, and explore opportunities for product deployment into upcoming projects and trials.

We also visited existing licensees and potential manufacturers for the end-product, as well as potential suppliers in our supply chain. These meetings were all very successful and discussions have continued since my return to Perth.

LOI Signed for first US project

As recently announced, we are thrilled to have a Letter of Intent signed for our first project in the US. We anticipate this to be the first of many as having a reference project in Atlanta, Georgia will provide excellent exposure of our product and technology for future sales.

[ASX ANNOUNCEMENT](#)

an evaluation for the US Air Force at Tyndall Air Force Base in Florida, trialling Nodis' dynamic switchable glazing powered by ClearVue's PV window technology, presents very exciting opportunities for the Company in this smart glass market.

We look forward to providing further updates following the completion of Phase 2 of the evaluation within yet another area of opportunity for the Clearvue product, being in support of the defence industry in their sustainability and carbon reduction commitments across their various operations.

[ASX ANNOUNCEMENT](#)

US Office & Showroom, Silicon Valley

Travelling to the US also provided an opportunity to visit the proposed site for opening a new office, that will include a showroom and working space in San Jose, right in the heart of Silicon Valley. Located directly next to our solar research and development partner D2Solar, we will be retrofitting the windows of the showroom with ClearVue PV solar windows to really showcase our product. We are in the process of finalising the lease with a view to be taking occupancy from 1 July 2022.

New Head of Investor Relations

We are very excited to be welcoming on board our new Head of Investor Relations, Earle Harper, who is extremely well credentialled and has been a long time supporter of ClearVue.

Earle's primary responsibility will be to execute and coordinate the global IR function for the Company, including all internal and external stakeholders' engagement and working in conjunction with the Company's appointed PR and IR firms surrounding the messaging of ClearVue. He is tasked with building the necessary relationships and stakeholder engagement and to build the ClearVue story with existing shareholders and grow the shareholder base, including having a focus on institutional and ESG investors.

We look forward to working with Earle, who we are confident will quickly become a key asset to the ClearVue team.

PROFILE

US PR Firm Appointed - Profile Advisors

The Company is pleased to announce the recent appointment of New York based PR Agents [Profile Advisors](#), who have been engaged to elevate and promote ClearVue's brand presence and market our offering through dedicated high-touch communications and US media relations, in support of our commercial aspirations within the US market.

We are excited to be working with the team at Profile and look forward to generating strong US media engagement with their support.

We look forward to keeping the market updated as these arrangements progress.

ARC Centre of Excellence in Exciton Science

I am delighted and extremely proud to have been invited to join the International Advisory Committee for [ARC Centre of Excellence in Exciton Science](#), to help the Centre work towards the translation of research into commercial outcomes, where I hope to bring our knowledge and experience of ClearVue's own commercialisation journey in the solar / renewable energy space. I look forward to taking part and to bringing my own learnings from the involvement back to the Company.

ClearVue Europe

Dieter Moor will be completing his arrangement with the Company from the end of the financial year.

The Company has now appointed Mr Alexander Valenzuela as its 'General Manager - Europe'.

Alexander has over 15 years of senior management experience in marketing, sales and business development, acting as vice president of European and Global operational activities whilst working for innovative companies in the renewable energy sector.

He has a successful track record of business development and sales achievements, selling in a B2B level to leading industry players in the areas of building & construction materials, automotive, advertising and electronic consumer markets.

Alexander has deep technology understanding and execution experience using several PV technologies: crystalline silicon, amorphous thin film technologies, organic PV, nanotech interlayers, etc. and is particularly familiar with printing, evaporation, vacuum deposition, roll-2-roll, and other innovative PV manufacturing processes.

With over 10 years of architectural and design award-winning career, Alexander has also provided representation of Germany as host of the Universal Exposition 2000, focusing afterwards on environmentally friendly technology applications for buildings and consumer products.

Alex will continue to represent ClearVue's activities in Europe and we are confident he will bring to the company a dynamic energy with his wealth of experience in technology and solution sales.

Plans to open an office/showroom in Europe are also underway and we look forward to sharing more on this in due course.

European Smart Glass Industry Association (ESGIA)

ClearVue Technologies is proud to be a founding member of [European Smart Glass Industry Association \(ESGIA\)](#).

1. Promotional activities - for the application and usability of smart glass in buildings and vehicles through attendance and participation in both national and international tradeshow and conferences.

2. Regulations & standardization - work towards collaborated standards for the usability of smart glass and the combination of products within this field such as software standards within the Smart Home concepts.

3. Integration & collaboration - through the promotion of working together and combining the available technologies and overcoming bottlenecks in, for example, the supply chain for (new) materials.

US MARKET UPDATE

Basil Karampelas, CEO (North America)

It's hard to believe that it has only been four months since my appointment as ClearVue's CEO for North America and from day one, I've been imbedded within a whirlwind of activity and progress, as our company continues to establish itself as the global market leader for solar windows.

Throughout my first few months with the company, I have been fortunate to meet many of the ClearVue team in person and a sizable number virtually, and at some point in the near future, I hope to have met everyone in our company within some capacity. More than ever, I am convinced that we will be successful in our mission to bring electricity generating windows to the global market. To that end, I use the following key concepts as guideposts as I lead our North American team.

Commitment: I will drive an ethos of commitment to our customers, suppliers, shareholders, and our colleagues. Commitment to providing potential clients answers within two working days, commitment to focusing on activities that create value and not least of all, commitment to supporting each other as much as possible to enable the company to reach success as a team.

Accountability: We will stand by our financial and operational analysis that we provide to potential customers. This accountability means holding ourselves to the highest standards of quality and integrity and by doing so, we will create a reputation that will engender trust not only within our organization, but also to our existing and potential clients and will provide them with confidence that they have made the right decision.

be able to execute on a 24/7 basis. We will have the highest quality of analysis, and we will adhere to strict levels of quality control in our analysis and products. If we fail to achieve our intended levels of quality, we will make immediate adjustments to raise them to our high standards.

First sale in North America

As you may have seen via the ASX or in the press, earlier this week we announced that we had signed a letter of intent with LabReal to undertake the first installation of our windows in North America. This is a tremendous milestone for our company and although I originated this particular opportunity, we would not have been able to get to where we are today without the huge collaborative effort that was put in by our technical team in Australia, who worked very hard over several weeks to get LabReal to the point that they were ready to sign on the dotted line.

My experience with new technologies has shown me that typically the first sale in a specific geography is notoriously the most difficult. Therefore, I expect that our North American sales team will be building on this success in the coming months as they will now have a reference project in North America, containing ClearVue PV product that they can talk to with prospective clients.

ASX ANNOUNCEMENT

PROFILE

Appointment of PR firm

I am pleased to report that as of June 1, Profile Advisors officially commences as our Public Relations firm for our North American operations. Having worked with their affiliate Prosek, I am confident that they will be successful in raising market awareness of ClearVue Technologies in North America and can secure the type of media coverage that we need as we take our company to the next level.

Our appointment of Profile is a good example of how we will take decisive action to raise the level of quality in our organization.

2022 Indoor AgTech Innovation Summit, NY

As many of you know, I will be speaking at the end of the month in New York at the [2022 Indoor AgTech Innovation Summit](#). This event will be a terrific opportunity for our company to capitalize on our success in Asia and Australia in the greenhouse space by sharing our story with a primarily North American audience.

Additionally, this event is being held in New York, which is the epicenter of carbon reduction activity due to [Local Law 97](#) and its carbon reduction requirements, coupled with the fact that there are countless building management companies and real estate asset managers headquartered in New York. We have had discussions with many of these companies already, and participating in the upcoming Indoor AgTech Innovation Summit gives us further opportunity to follow up with them while we are in the area.

Head of IR Appointment

Earle Harper, Head of Investor Relations

"It is an exciting time to join a company at the forefront of global change.

As a Company with a leading edge technology platform and the with the ability to address real global issues, I believe ClearVue is well positioned to be the product of choice within the global building materials market as the world transitions to net-zero buildings.

As the Head of Investor Relations, I look forward to communicating to all stakeholders the extraordinary opportunity and commercialisation journey ahead of ClearVue, with a business model that:

- operates in an environment of mandated change;
- an evident change in buyer behaviour to the acceptance and adoption of environmental solutions;
- no obvious replacement for glass;
- is highly scalable, and;
- has a large addressable global market.

I would like to take the opportunity to thank the team and board of ClearVue for the opportunity and I look forward to sharing the ClearVue journey."

Upcoming Events

**Brooklyn, New York
23 - 24 June 2022**

On 23 June 2022, Basil Karampelas will be presenting at the [Indoor AgTech Innovation Summit](#) in New York and ClearVue Technologies is proud to be Gold Partners for this world class sustainability event!

Basil will be part of a panel discussion on:

"Driving Profitability and Sustainability through Greater Energy Efficiency"

and is looking forward to be sharing ClearVue's successes within the greenhouse space.

As Gold Partners, ClearVue will also be exhibiting via a virtual booth, enabling those unable to attend the summit in person, the opportunity to connect from

PROJECTS UPDATE

Aqua Ignis Sendai Greenhouse, Japan

Aqua Ignis Hot Springs resort in Sendai City, Japan, featuring ClearVuePV solar glass greenhouse with over 180 of our large, custom sized panels measuring approximately 2m x 1m was officially opened on 21 April 2022. The opening of the resort was covered by local television and we are extremely proud of this fantastic greenhouse.

Planting is yet to commence, as the client is assessing

available, however it will be used to supply the resort with produce for its restaurants and fresh food market and provides great exposure for the ClearVue PV solar glass product at an international wellbeing resort that has been designed to provide guests and visitors with a "healing experience in space overflowing with nature".

Sydney Park Project

We remain in close communications with Sydney City Council in relation to when the official opening of the public park will be scheduled, as this will also be when ClearVue will be allowed to make our formal ASX Announcement on the location and provide a thorough overview of the completed project.

With interstate travel now also having returned to normal, Victor will be heading over to Sydney to be part of the official opening. We remain excited to be able to share these details and coverage with the market in due course.

MU GREENHOUSE UPDATE

Greenhouse Update

The Murdoch University Greenhouse is currently in the middle of its second experimental crop of the plant science and data collection trials.

As mentioned in our 19 April 2022 [ASX Announcement](#), ClearVue has made significant upgrades to the greenhouse's control and operational systems and data is now being collected from a vastly improved sensor array recently installed in the greenhouse, which includes 24 humidity sensors, 4 photonic sensors, 4 movement sensors, 4 x CO2 sensors and 49 point digital water and fertiliser meters. Manual measurements have also begun on soil moisture content on a per pot basis. The newly

There have been no significant reductions in energy harvesting and installation is showing good production stability during cloudy and rainy days. It is continuing to perform to expectations in respect to seasonal variations of light incidence and solar path.

Harvesting is soon to be undertaken, which will enable us to look at relative yields and water use and we look forward to updating the market on these results.
